Alma

The soul of care, finally remembered.

An AI companion for caregivers — capturing the small human details that medical systems miss.

Hackathon · Anthropic × Whale · Amsterdam

Built with love for caregivers everywhere

Alma

A familiar story

It's the new caregiver's first morning.

Joan moves into memory care. The aide has a 10-minute handoff and a stale binder.

By 11am, Joan is panicking. The aide tries everything. Nothing works.

A glass of water would have calmed her in seconds.

Her family knew. Her last caregiver knew. **The system didn't.**

The problem: Care systems remember diagnoses, not people. They miss the small human details that make care humane.

The solution: Alma captures the personal details that medical systems miss.

Alma

The gap

Care systems remember *diagnoses*. They forget *people*.

📋 What gets recorded

Allergies. Medications. ICD-10 codes. Vitals. Formal, sterile, structured.

🤫 What gets lost

Routines, triggers, life stories, comforts, fears — the things that make care humane.

💔 The cost

Distressed clients. Burned-out caregivers. Families repeating themselves at every handoff.

The system remembers the chart, not the person.

Alma

Why now

A wave is coming.
The system isn't ready.

2.6×

growth in dementia cases by 2050 in NL

1 in 4

caregiver shifts staffed by an unfamiliar aide

0

tools designed for the caregiver — not the doctor

LLMs finally have the patience humans never had.

Alma

What exists today

Empty fields and good intentions.

Dutch caregiver platforms like **Nedap** already include a section called *"Mijn Verhaal"* — "My Story" — meant for families to record what makes their loved one *them*.

Almost no one fills it in.

Why it stays empty

- ✓ Families don't know it exists
- ✓ It's a blank text box — no guidance
- ✓ One-shot, not living
- ✓ Nothing surfaces it when caregivers need it

The system is broken, not the intention.

Alma

Meet Alma.

A voice-first AI layer that captures the small personal details medical systems miss — and surfaces them to the right caregiver, at the right moment.

🎙️ **Voice in**
Family shares details

→

📋 **Briefings on demand**
Ready when needed

→

🆘 **In-the-moment help**
Crisis support

Care that finally feels personal.

Alma

How it works

A WhatsApp voice note. That's the whole interface.

Alma

Hi! I'm Alma. Tell me about your mom — anything you'd want a new caregiver to know.
10:42 AM

🎙 0:42 voice note

Got it. I noted: she calms with "Crazy" by Patsy Cline, drinks water when anxious, and dislikes loud TV.
10:43 AM

Can I ask — what does her morning routine usually look like?
10:44 AM

The system fills itself in.

- ✓ Family sends voice notes whenever they think of something
- ✓ Alma structures it into **routines, triggers, identity, care preferences**
- ✓ Spots gaps and asks gentle follow-up questions
- ✓ Re-confirms stale facts before they go wrong

💡 Key insight

Alma learns from every interaction, building a comprehensive profile that gets richer over time.

Simple, human, and always learning.

Alma

For the caregiver

Two modes. Both *human*.

PULL

📖 The Briefing

Before the shift, a one-pager that reads like a friend introducing you to their grandmother.

> *"Joan was a 3rd-grade teacher for 30 years. She lights up when you ask about Dresden..."*

PUSH

🆘 In-the-moment

When something escalates, Alma chimes in via voice — calm, specific, knowing.

> *"She seems agitated. Try a glass of cold water — it's worked every time this month."*

Care that adapts to the moment.

Alma

Alma in practice.

The complete journey from family notes to crisis support — care that finally feels personal.

Crisis moment
Alma chimes in

Calmer mornings. Better handoffs. Care that finally feels personal.

Alma

We don't replace, we fill the gap

Alma plugs into the systems caregivers already use.

🔌 Nedap / Mijn Verhaal

We programmatically populate the **"My Story"** field that has lived empty for years.

✓ No manual entry required

🩺 EPD-compatible

Alma sits **beside** the medical record, not on top of it. No regulatory rewrite required.

✓ Seamless integration

📱 No new app

Families use **WhatsApp**. Caregivers get a briefing in their existing portal. **Zero friction.**

✓ No learning curve

Integration that actually works.

Alma

Beyond dementia

One pattern. *Many people.*

🧠 Dementia care

Where we start. Capturing the small details that make care humane.

Focus: Memory triggers, routines, comfort

♿ Disability support

Personal assistants, group homes, and complex care needs.

Focus: Independence, advocacy, daily living

🏥 Hospice & palliative

Preserving voice and dignity at end of life.

Focus: Comfort, legacy, peace

👶 Pediatric care

Non-verbal kids, complex needs, and family support.

Focus: Communication, development, safety

Anywhere a person can't fully advocate for themselves, *Alma carries their voice forward.*

Alma

Care, with memory.

"Because the person behind the chart deserves to be remembered."
